Authors Response to the Reviewers Reviewer: 1 Comments to the Author I offer following suggestion to improve the paper: 1. Use Johensens cointegration test to prove if there is only one cointegrtaing relationship. Becuase ARDL is not better estimation method if more than one cointegrating relationship exits (see Pesaran for details) Author's response: Thank you very much for your worthy comment, as per your worthy suggestion, we have performed the Johansen cointegration test and confirmed that there is one cointegrating relationship exists between the variables, hence ARDL is the better fit modeling technique for this data set (see, in appendix, page no. 33). 2. Use structural break unit root and cointegration tests Author's response: Thank you very much for your worthy comment, as suggested we have used structural break unit root test and cointegration test (see, table 4 and table 6 at page no. 16 and 18, respectively). 3. Use break dates identified in cointegraion with break model as dummy in ARDL. Author's response: Thank you very much for your worthy comment, as suggested we have use break

dates s identified in the cointegration with break models as dummy in ARDL as dummy of break dates insignificant at short- and long-run, hence, we shown the results in appendix for ready reference (see, in appendix, page no. 34). 4. Improve results discussion part. Author's response: Results has been improved accordingly (see, page no. 21-22). 5. Motivation and contribution sections are weak. Author's response: Motivation and contribution of the study has been improved accordingly (see, page no. 2 and 7). Reviewer: 2 Comments to the Author to see this references Mat Som, A. and Shqjarat, M. (2013). Tourism Seasonality in Highland Destination: A Case Study of Al Bahah Province, Saudi Arabia. International Journal of Innovations in Business. Vol. 2.No.6. Pp.630-644 June. Shqjarat, M. Altarawneh, I. (2019).Quality of Tourism Services in the Kingdom of Saudi Arabia; Case Study of the Province of Aldarrab. Al-Hussein Bin Talal University Journal of Research. Author's response: Thank you very much for your worthy comment, as suggested we have added both the references in the literature for sound inferences (see, page no. 2 and 6).
